Random Print Repeats

For flat plate jobs, Fischer requires that scatterprint artwork form a discernable repeating pattern. It is standard procedure for us to make minor adjustments during proofing to achieve an existing cylinder repeat. Those adjustments may include minor changes to logo size, spacing and occasionally, design rotation — or any combination thereof. If a customer prefers to fully prep their art, we suggest that it be set up repeat at 18", as all of our tissue presses have tooling of that size. Other common repeats for flat plates include 15", 16" & 17".
